GLOBAL PUBLIC HEALTH & FOOD SAFETY SUMMIT
HONG KONG
Nina Hotel Tsuen Wan West, Hong Kong

2026 Global Public Health & Food Safety Summit

The Global Public Health & Food Safety Summit, organized by the National Pest Management Association (NPMA) in collaboration with CEPA and FAOPMA, serves as an international platform for professionals, researchers, and policymakers working in the fields of pest management, public health, and food safety. The summit is dedicated to addressing contemporary challenges associated with pest-related risks that affect human health, food security, and environmental sustainability.

The event brings together pest control operators, vector management specialists, food safety professionals, public health officials, scientists, and academic researchers from different regions of the world. Through technical sessions, expert presentations, and collaborative discussions, participants will explore current research findings, innovative pest management practices, and modern strategies for disease prevention and food protection.

In addition to academic and technical learning, the summit offers opportunities for professional networking and international collaboration among industry leaders, researchers, and stakeholders.

The event encourages knowledge exchange and supports the development of effective policies and operational standards for public health protection and food safety management.

Standardizing Quarantine Pest Lists for the ASEAN Pest Database

The Association of Southeast Asian Nations (ASEAN) member states face ongoing challenges in managing quarantine pest information due to fragmented data systems, inconsistent pest assessment methodologies, and limited coordination among National Plant Protection Organizations (NPPOs). These limitations hinder timely responses to emerging pest threats and affect regional plant biosecurity efforts.

In collaboration with ASEAN member states and the ASEAN Secretariat, TF-APD aims to enhance data sharing, strengthen pest risk

analysis processes, and promote consistent, science-based pest management across the region.

CABI serves as the Technical Secretariat for TF-APD, facilitating coordination among national contact points, supporting harmonized pest risk analysis (PRA) approaches, and encouraging regional knowledge exchange on plant biosecurity.

IPM PROFESSIONAL IN PAKISTAN

SYED HASSAN ALI
CEO, Tata Pest Control
Hyderabad, Sindh

He founded his pest control company in 2018, committed to promoting quality pest management in Sindh. With strong experience in the field, he has developed a reputation for delivering reliable and safe pest control services for both residential and commercial sectors.

Under his leadership, Tata Pest Control has become known for its professional approach, use of modern techniques, and commitment to customer satisfaction. His company's areas of specialization include termite control, fumigation services, and integrated pest management, focusing on effective and long-term solutions.

Severe Pest Outbreak Puts Sindh's Mango Production at Risk

Hyderabad: Mango orchards across Sindh are facing an intensifying wave of pest infestations, raising urgent concerns within the agricultural community.

Contributing to this crisis is the growing impact of climate variability, including the influence of El Niño, which has led to extreme temperatures exceeding 45°C. Such conditions not only accelerate pest proliferation but also place additional stress on crops like cotton and rice, increasing the risk of broader agricultural losses.

In response, stakeholders have called for a coordinated, science-based approach involving government institutions, researchers, and farmers.

TORIOS MULTI – ٹوریس

FOR MULTIPLE STORED PRODUCT INSECT PESTS INSPECTION

TARGET INSECTS

FEATURES OF TORIOS MULTI

- The device is reusable which supports cost-efficient and environment friendly pest management
- By changing the lures only, this device can be used to monitor seven species of crawling insects
- The device is used for "habitat survey" and "monitoring" seven species of crawling insects with 1 lure
- Effective in finding out existence of seven types of crawling insects in a particular area
